About the Conference:

The invaluable data which the researcher across different domains generates through their research efforts has great interdependence to deduce meaningful hypothesis which germinate new discoveries and creates innovative results. Computational models are often coupled with high performance computing to solve complex physical problems arising in Engineering analysis and design. After a resounding and overwhelming response in the 1st conference, Amity University, Greater Noida Campus is conducting 2nd edition of “International Conference on Futuristic Trends in Computational Analysis and Knowledge Management” from 16 & 17 March 2017. This conference is aimed to take off from the first edition which was IEEE and DST sponsored. There were many topics which were deeply deliberated and which brewed new ideas. Thus giving rise to new avenues for researcher. We aim to take those concepts further to derive fresh hypothesis and arrive at the logical deductions. The participation of scientist from across the globe was very encouraging and this time we are anticipating even larger congregation from more diverse domains as we are reaching out to many eminent philosophers, thinkers and academicians from scientist fraternity.
