

AMITY UNIVERSITY

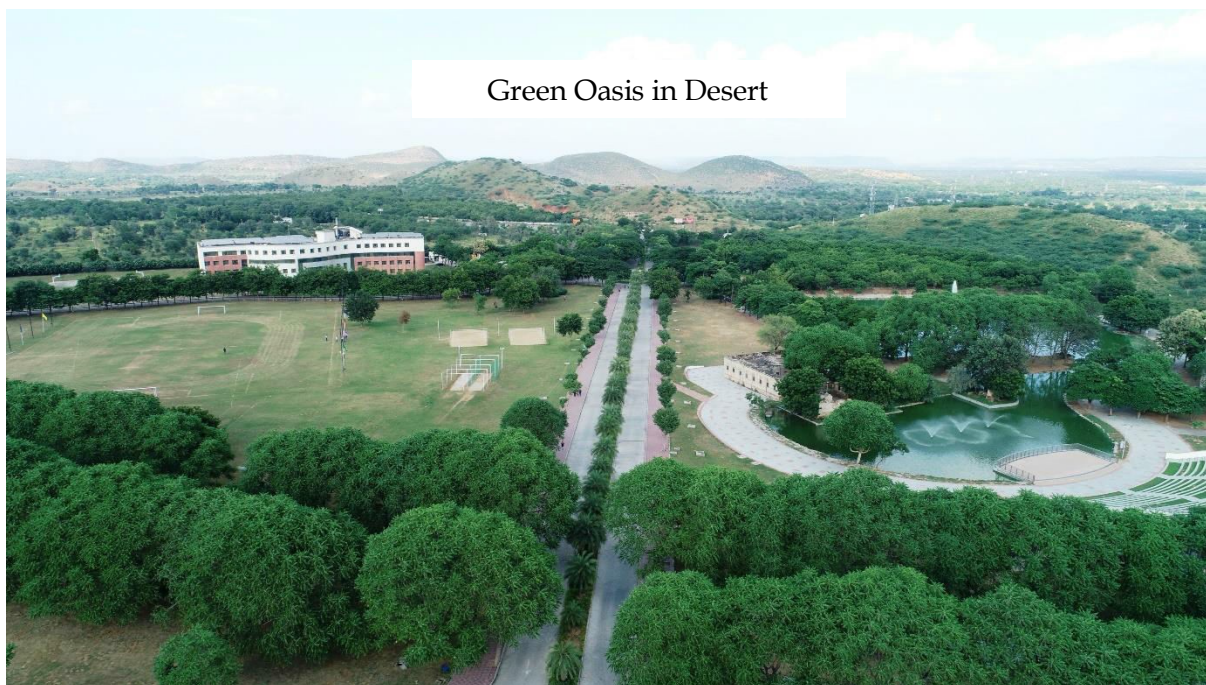

RAJASTHAN

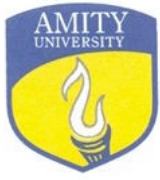

SDG 15 - Life on Land

Amity University, Rajasthan, located in the mountain ranges of the Aravali and adjoining to semi-arid zone of Indian Thar Desert, University is committed to create its 152-acre campus into green oasis by using sustainable practice with a manmade water-harvesting lake contributing towards conservation of natural resources and flora and fauna. University is serious about desertification and land degradation including pollution on land which is global concern, majority of our departments and research center are executing R & D and organizing awareness in society and contribute actively and effectively. The university has reshaped its campus into a green oasis which attracts rich flora and fauna biodiversity and encourages its stakeholders to promote the same.

Various schools/institute with in the university are actively engages environment related issues while designing research problems of doctoral programmes. The university has policy on waste management which protects its green belt from pollutants including plastic waste.

University gives priority to its neighboring cultivars for food supply and committed towards the sustainability. The university organized various education programmes on eco systems and its conservation.
