Job Description

- Work to standardize repeatable tasks and steps across multiple accounts. This may require creating documentation or scripts that can be used to solve the same problem in the future - Automation
- Team members participate once or more a day in cadence discussion on team performance. These meetings are typically led by the primary pool manager or Dispatcher. They discuss issues or challenges, and receive trouble-shooting input / advice from other team members. They may also discuss team performance trends. Primary pool team members may also separately interact and exchange information with members of cross-pool teams
- Implement medium to complex product upgrades and/or medium to complex security compliance corrections without assistance
